

ShuttleLab

MEASURE · IMPROVE · DOMINATE

ShuttleLab is the private training platform of our badminton team — one coach, his players, and everything that happens between matches: testing, planning, drilling, video analysis and mental support, in a single app that lives on every player's phone.

Performance tracking

Players log six fitness tests; the app keeps best and average, draws season trends, flags new personal bests and measures progress against the coach's goals.

Season planning

A season target, dated training phases and a tournament calendar per player — with the 2026 federation schedule built in and editable by the coach.

Pro 3D Court

A true-scale 3D court for singles, doubles and mixed. The coach builds drills shot by shot; athletes run, lunge and jump-smash with real contact points, legal serve boxes and automatic pair rotation. Four TV-style cameras.

Film room

Match videos upload from any phone to private cloud storage. The coach pins notes to the exact second — auto-pause, slow-motion, drawings and his own recorded voice — and players watch it back with everything firing itself.

Multi-shuttle & squads

Coach-fed multi-shuttle with a placeable feeder and Rapid / Steady / Relaxed rhythms, plus 3-v-1 and 2-v-1 pressure drills where every player's position and movement is choreographed.

Mind Room

A calming space that changes every visit — breathing exercises, a gentle game, powerful encouragement in the coach's own words, a private mood sky only the player can see, and a direct private line to the coach.

Built private

Every page sits behind a personal sign-in. Videos live in a private storage bucket reachable only through short-lived secure links; the database enforces who may write what; players see team rankings without other players' names; and a player's Mind Room check-ins are visible to no one else — not even the coach.

How it runs

A fast, installable web app (no app store needed): open the link, sign in, add to the home screen. Hosted on Vercel, data on Firebase, video on Cloudflare R2 — updates reach every device instantly.
